May vs. must alias analysis

```
a = new A();
if(..) {
    b = a;
}
c = new C();
d = c;
```

$$\text{may-alias}(a, b) = true$$

$$\text{must-alias}(a, b) = false$$

$$\text{may-alias}(a, c) = false$$

$$\text{must-alias}(c, d) = true$$
